

Using Alcohol Ink On Acrylic Gem Chandelier

Supplies

- Adirondack Alcohol Ink
- Tim Holtz Foam Applicator
- Inksentials Non-Stick Craft Mat
- Alcohol Blending Solution
- Rubber or Plastic Gloves

Directions

1. Put on your gloves before getting started to avoid getting ink on our hands. You could also wear an apron to avoid getting ink on your clothes. Apply a small amount of alcohol ink to the foam applicator
2. Use a tapping action to cover the acrylic gems with the ink
3. Set aside and let dry when done

You can create an ombre look by applying the same shade in different intensities or alternating colors onto the gems.

Remember, if you do not like the color after you've applied it or want to replace it with another color, you can use the Adirondack Alcohol Blending Solution to remove the color (if only on a non-porous surface)
